handle	Aluminum	Anodizing
for lock core	HD#(62*95mm)	HK#(70*95mm)

Product Description

A smart hotel lock, also known as a biometric hotel lock, is a security system that uses electronic components and programming to allow authorized individuals to enter hotel bedrooms. The lock typically includes biometric authentication technology, such as fingerprint recognition or facial recognition, which can provide an additional layer of security. Some advanced biometric hotel locks may also offer additional features such as remote access, real-time monitoring, and integration with other hotel systems. A smart system for a hotel bedroom door lock would be a specific type of smart hotel lock that has been designed to work with a particular smart system or platform. This could include features such as compatibility with voice assistants, the ability to integrate with other smart devices in the room, and the ability to control the lock remotely using a mobile app.
